Application/Control Number: 09/661,360 Page 2

Art Unit: 2154

DETAILED ACTION

- 1. Claims 1-17 are presented for examination.
- 2. Claims 9-15 are allowable.
- 3. The text of those sections of Title 35, USC code not included in this action can be found in the prior Office Action.

Claim Rejections - 35 USC § 103

- 4. Claims 1-8 and 16-17 are rejected under 35 U.S.C. 103(a) as being anticipated by Ote et al.[U.S. Pat. No. 6199180].
- 5. Ote was cited in the previous office action.
- 6. As to claim 1, Ote teaches the invention as claimed including: a method for logging event data from at least one operable application program resident on any one or more of a plurality of computers or at least one peripheral device [col.1, lines 8-16; 12, Fig.1A] operably connected in a network to a server [col.1, lines 8-23; 161, Fig.1A; i.e., the network OS function as server] using a log manager device driver, the logged

Application/Control Number: 09/661,360

Art Unit: 2154

event data comprising a log manager file having events of the type which related to performance and fault such as errors and warnings [12113, Fig. 5A; 5054-5055, Fig.11; col.7, lines 21-50] that can be used to perform network diagnostics and troubleshooting [17, 19, Fig.1A; col.4, lines 46-67], said method comprising the steps of:

- registering said log manager device driver with said server to receive all incoming event data from the computers or at least one peripheral device and as a device driver for said log manager file [col.7, lines 21-61; note that both the agent 17 and the SVP driver 19 must be registered with the OS otherwise these two modules won't be recognized by the OS];
- receiving said event data by said log manager device driver [col.7, lines 31-35]; and
- responding to a download request for event data from any requesting computer by said log manager device driver, so that said requesting computer can use said log manager file to perform diagnostic or troubleshooting activities [col.7, line 62- col.8, line 7; note that in a network environment (such as Internet) a server is nominally accessible to any requesting computer via a public line (see, e.g., Ote: col.1, lines 8-24 and Fig.6)].

Ote does not specifically teach that the logged events are of the type relating to completion, connections, processes, terminations and status changes. However, it is obvious that these detailed events are related to the category of either performance or software/hardware faults. It would have been obvious to one of ordinary skill in the art

Art Unit: 2154

that Ote's event log may include a widely selected events including those as claimed because Ote teaches that the management system is designed for monitoring and controlling fault and performance of a plurality of computers.

- 7. As to claim 2, Ote further teaches that said receiving step further comprising the steps of:
 - waiting for event data from said at least one application program or said at least one peripheral device by said log manager device driver; and sending event data to said log manager device driver by said at least one application program or said at least one peripheral device [col. 7, lines 51-61].
- 8. As to claims 16-17, since the features of these claims can also be found in claims 1-2, they are rejected for the same reasons set forth in the rejection of claims 1-2 above.
- 9. As to claim 3, Ote further teaches that said method further comprising the step of saving said event data in an event recorder by said log manager device driver [col.7, lines 31-35 and 51-61].

Ote does not specifically teach that the event is stored in a queue. However, storing critical events in a queue is well known in the art and it is an obvious option for Ote's collected events to be stored in a queue because by doing so the events can be retrieved in accordance with its occurring sequence.

Application/Control Number: 09/661,360 Page 5

Art Unit: 2154

10. As to claim 4, Ote further teach deleting an oldest event data from said event queue to make available space for new event data when said event queue is full by said log manager device driver [col.7, lines 35-41].

- 11. As to claim 5, Ote further teaches that said method further comprising the step of:
 - sending a download request for log manager file to said server by said requesting computer;
 - determining whether said server received said download request by said requesting computer and opening said log manager file from said log manager device driver if said server received said download request by said server [Fig.9]; and
 - returning and displaying an error message if said server did not receive said download request by said requesting computer [5055, Fig.11].
- 12. As to claim 6, Ote TT the returning step further comprising the step of displaying said error message to the user of said requesting computer by said requesting computer [col.7, lines 44-50].
- 13. As to claims 7-8, Ote further teaches that said opening step further comprising the steps of:

Application/Control Number: 09/661,360 Page 6

Art Unit: 2154

 determining, by said server, whether said log manager file was successfully opened from said log manager device driver;

- returning an error message to said requesting computer when said log manager file was not successfully opened by said server; and
- reading said event data stored in said event queue when said log manager
 file was successfully opened by said server.

[5033, Fig.9; col.5, line 46- col.6, line 5; i.e., in critical situations when access of the event data could not be attained via the OS, access of such data is still made possible by the direct connection to the SVP board].

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Kiddler et al. [US pat. 6715097]; and Barrett et al. [U.S. Pat. 5935262].

15. Applicant's arguments with respect to claims 1-8 and 16-17 on 9/14/2004 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wen-Tai Lin whose telephone number is (571) 272-3969. The examiner can normally be reached on Monday-Friday (8:00-5:00).

Application/Control Number: 09/661,360

Art Unit: 2154

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Follansbee can be reached on (571) 272-3964. The fax phone numbers for the organization where this application or proceeding is assigned are as follows:

(703)872-9306 for official communications; and (703)746-5516 for status inquires draft communication.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)305-3900.

Wen-Tai Lin
